Bespoke Steel Buildings

DESIGNED, SUPPLIED and ERECTED

Manufacturing & Delivery

Manufacturing.

An efficient and durable manufacturing facility is one of the many crucial elements that can determine the success of your business regardless of the product you produce.

Town & Country Bespoke Buildings is a major supplier in the low cost custom engineered metal buildings sector and supplies to a vast range of industries both in the UK and in Europe and the Middle East. An investment in a Town & Country building offers uncompromising quality, exceptional customer service and substantial cost savings over more traditional forms of construction.

All buildings supplied by Town & Country are constructed using the portal frame methodology using cold rolled steel which is high tensile and extremely durable. It is very strong, inexpensive and easy to erect - small sections can span long distances, cutting costs and making for innovative construction. It is supplied cut to size and pre-drilled to avoid wastage.

Town & Country buildings are British manufactured and materials are constructed to ISO1509001:2000 specification. They are also supplied with a structural calculations package, can be designed to your requirements and manufactured and delivered within 2/3 weeks depending on size. All buildings are engineered to BS6399-part 2

Delivery.

All Town & Country buildings are delivered complete. They are delivered from one central point, flat packed with all doors, windows, fixings, brackets, steel and claddings, roof lights, mezzanine, etc and are not released until fully checked. All quotations allow for delivery and unloading on site.
